

example: goodness of fit

~IEAS model
number of non-loops

continuation of work

- ☑ analyze the co-occurrences of multiple relation types (undirected/directed/signed)
- ☑ define statistics for quantifying structural holes in multigraphs
- ☑ scale it up in terms of number of ego-nets:
 - ✓ using digital trace data e.g. social media accounts
 - ✓ how to include perceived alter-alter ties?
- ☑ community detection based on egos' structural features
